Installation:

*Masons Hydro Flashing Ta*pe must be installed in accordance with these instructions.

1. **Rigid Air Barrier** requires to be secured and fixed into position.

2. To ensure maximum adhesion of the tape, the substrate surface needs to be clean, dry and free from any dust or other contaminants.

Flush joint

75mm tape

3. Position the 75mm *Hydro* tape so that the seam between the **Rigid Air Barrier** is at the center of the tape line. The *Hydro Tape* needs to completely cover the joint.

4. After application cut tape to the required length

5. To ensure that the *Hydro Tape* is properly bedded against the panels and at the edges, press the tape into position with a hard roller tool.

External Corner

3. Cut the 75mm *Hydro Tape* to length (add 50mm either side for movement).

4. Position half of the *Hydro Tape* on one wall and 'roll' it around the corner and press it into position on the adjacent wall.

5. After application cut tape to the required length

75mm tape

6. Finish by pressing *Hydro Tape* into position with a hard roller tool.

Internal Corner

fold 75mm tape

peal back half

3. Cut the 75mm *Hydro Tape* to length (add 50mm for movement).

4. Pre-fold the *Hydro Tape* in half (length ways)

5. Peel back half of the protection strip to the crease line.

6. Position the *Hydro Tape* on one wall, press it securely and tight in towards the corner. Treat with a hard roller.

7. Peel the protection strip now completely off and press firmly outwards from the corner.

7. Finish by pressing *Hydro Tape* into position with a hard roller tool.

Hydro Flashing Tape must not be stretched when joining 2 sections of tape, overlap by 100mm or more.
