

# Smart One Controller

## Central Heating Smart One Controller

A stylish thermostat is how home comfort can be controlled by the homeowner. Central Heating New Zealand has specifically designed the new intuitive Smart One Controller for New Zealand radiant heating and cooling systems.

The easy to use touch screen interface works much like your smart phone so you can set your desired comfort temperature to suit your lifestyle at a swipe of a finger. As a room thermostat, it works by sensing air temperature, switching on the heating when the air temperature falls below the thermostat minimum setting, and switching off when the set temperature has been reached. With the added feature of a floor probe, you get complete, accurate underfloor temperature control too.

For those on the go, you can switch your heating on or off via the Smart365 App or enable the geolocation feature, and your heating will turn on/off when you arrive or leave home. It will also switch to an eco-friendly temperature level overnight. Simply program the wall mounted controller for heating/cooling times and temperatures, and the system reacts to your exact comfort requirements. With the self-learning ability, the Smart One Controller builds the best schedule to provide exceptional comfort.

- Stylish design
- Easy to use touch screen interface
- Easy and quick installation
- Heating system can be controlled from anywhere using our Wi-Fi controller
- Programmable minimum and maximum floor temperature settings
- Optimised for radiant heating and cooling systems
- Self-learning and geolocation features save energy
- Weather monitoring for climate control
- Air quality sensor
