JURALCO SUPASCREEN SECURITY DOOR AND WINDOW SYSTEMS

ISSUE 5-24 v1

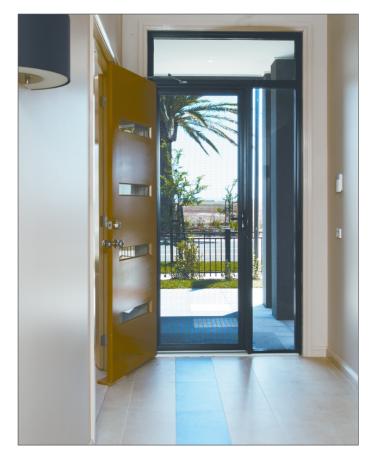

Juralco Aluminium Building Products Ltd designs and distributes specialist aluminium joinery systems through a national network of franchised fabricators and agents.

For more than 25 years we have been at the forefront of specialist aluminium door and window products suitable for New Zealand joinery and building methods. Our comprehensive product range includes security and insect screens, balustrades and gates, shutters and awnings, shower screens, wardrobe doors and organisers and internal doors.

Juralco SupaScreen security doors and windows provide clear vision as well as insect protection and security to Australian standards. The patented assembly method leaves the marine grade woven 316 stainless steel mesh free from mechanical fixings such as screws, rivets and pins. The system is suitable for use in a wide range of installations including residential, commercial, school door and window applications, hotel ,bar, club, vehicle and shop window protection screens. Doors are available in both sliding and hinged configurations and windows in sliding, hinged and fixed configurations. All are custommade in a wide variety of frame powder-coat and anodised finishes and incorporate complimentary hardware.

> This Guide is intended for use by Architects, Specifiers and Fabricators See Index page 3

SupaScreen Security Doors - Clear vision combined insect mesh, security mesh and ventilation. Depending on colour and lighting this mesh is almost invisible. Set in a secure Door frame with 3 point security lockware. Available as windows, hinged or sliding doors.

Туре	Description Use the Bookmarks 💭 List to jump to selected pages			
General	4 - 5	General descriptions of Insect Window and Door types. Supascreen SS Mesh panels.		
Windows 6 - 10 Shows Hinged and Sliding Security windows. Extrusions, components and cutting allowances				
Doors, Hinged	11 - 20	Shows Hinged Security doors. Extrusions, components and cutting allowances.		
Doors, Sliding	21 - 31	Shows Sliding Security doors. Extrusions, components and cutting allowances		
Supascreen Panel Fitting	32 - 33	Shows how to fit Clearguard mesh to Window and Door frames		
Maintenance	34 - 35	Instructions for the care of Powder coated surfaces and the Supascreen Mesh		

Important information - Powder Coating systems.

<u>Powdercoat Systems</u> The new standard Dulux powder coating system used by Juralco is Duralloy Plus[®]. Also Duralloy[®] and Duratec[®]. Juralco Powder coated prices are for Duralloy Plus[®] and Duralloy[®] (same pricing). Duratec[®] prices on application. The following specs apply to Building Exteriors.

- Dulux Duralloy Plus® powder coating systems are suitable for properties greater than 10m from high tide level.

Residential and Light commercial buildings, 3 levels max. Warranty 15 yrs

- Dulux Duratec[®] powder coating systems are suitable for properties greater than 10m from high tide level All Residential and Commercial buildings. Warranty 25 yrs.

Attachment to structures A PVC Tape or similar material spacer must be used to separate powder coated aluminium items from all concrete and steel structures. Failure to do so can lead to the chemicals in the structure affecting the powder coating, leading to corrosion.

Swimming Pools The chlorinated water in swimming pools can cause the deterioration of powder coated surfaces, leading to corrosion of the underlying surface. It is recommended that Powder coated surfaces be 1200mm min from a pool.

<u>Care</u> The Dulux powder coating warranty period is conditional upon the surface being maintained

in accordance with the Dulux 'Care and Maintenance Instructions'. Download from Dulux or refer to the back page of this manual.

Juralco SupaScreen Security Door and Window Systems - Window Components

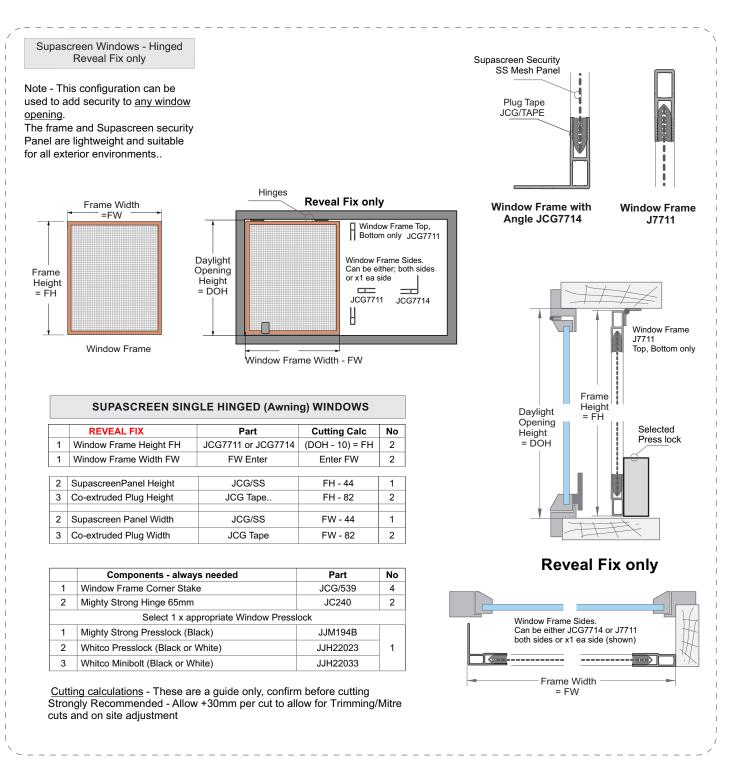

Juralco SupaScreen Security Door and Window Systems - Window Details

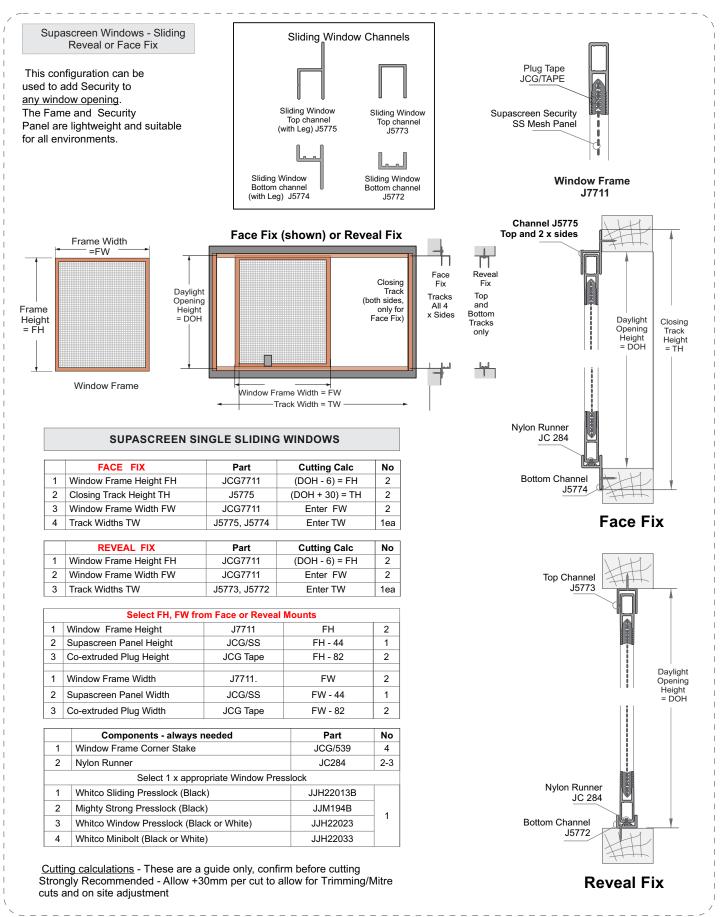

Ten Point Check List - SupaScreen Security Window Measuring

- 1 Decide what type of screen would be suitable for this installation. i.e. Sliding, Top Hinged, Side Hinged, Fixed or Lift In and Out.
- 2 Measure opening height and width according to the type of screen to be fitted.
- 3 Check distance of protruding handles or window stays to make sure the SupaScreen has enough fixing surface.
- 4 Check existing blinds, curtains, pelmets and drapes to see that the SupaScreen will not catch if and when opened.
- 5 Decide on suitable lock. Refer Juralco Security Hardware & Components Price List.
- 6 Discuss colour finish required.
- 7 Note any add ons timber packers, build out angles, sliding channels.
- 8 Don't leave the site until you are 100% sure the unit you have detailed will work.

Juralco SupaScreen Security Door and Window Systems - Hinged Door, Machining

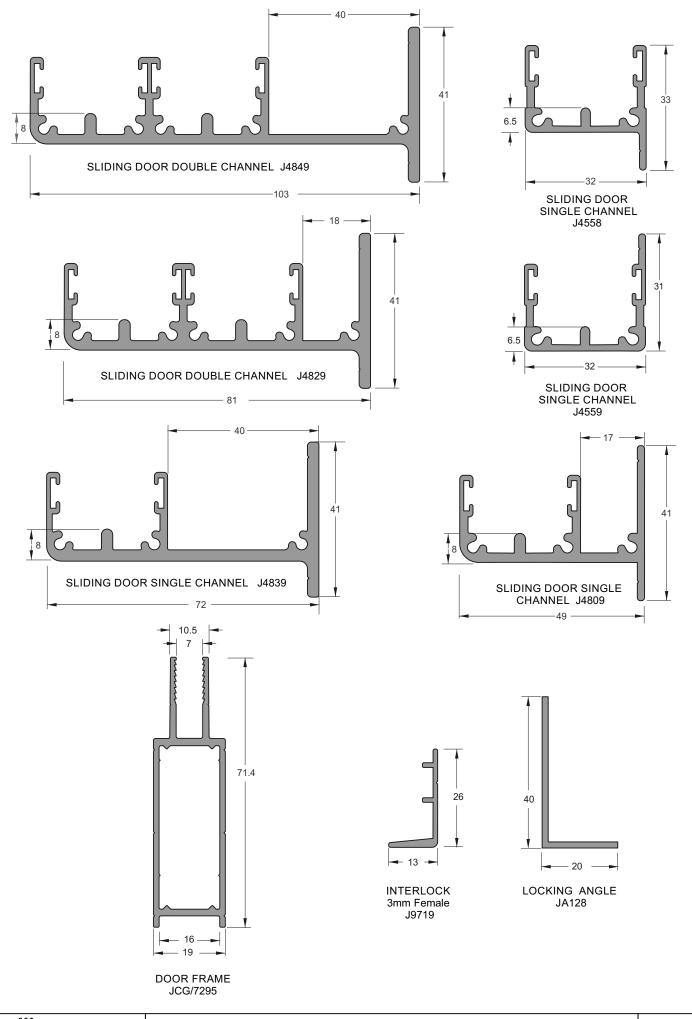

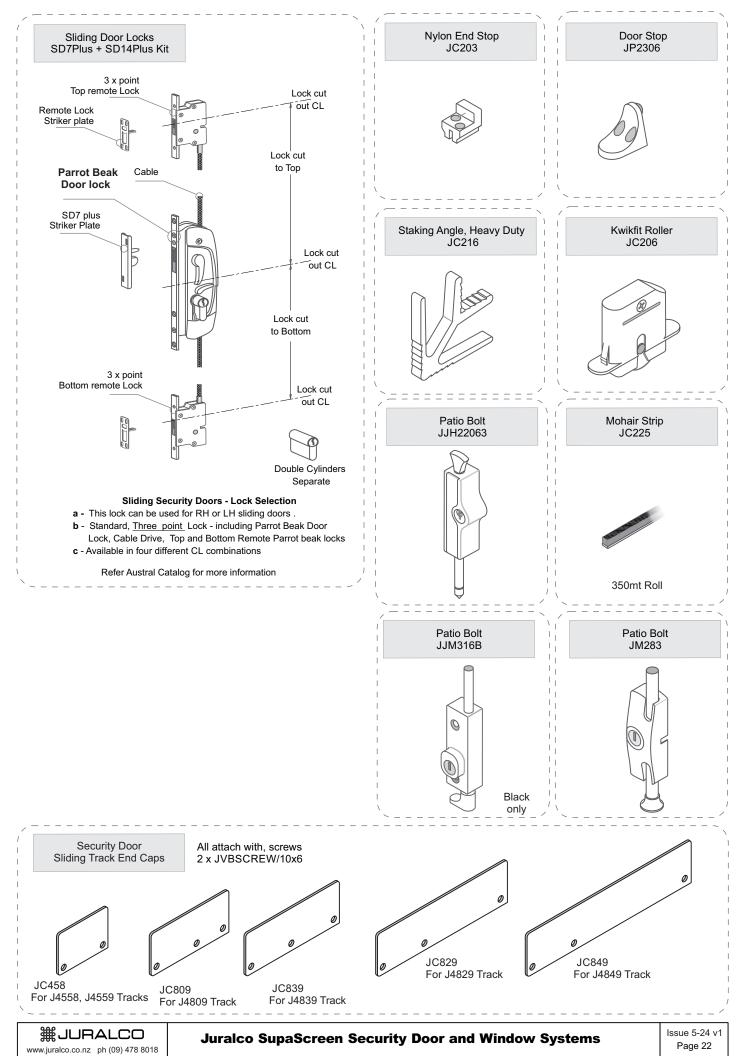

Supascreen Hinged Door Installation

- 1 Check door fits into reveal and the door has been made to site measurements.
- 2 Lift the door with 3mm packer on step to give clearance at the bottom.
- 3 Screw the top & bottom hinge to the reveal with 1 screw in the middle hole of the hinge.
- 4 Check the door swings correctly and fits into the reveal. If the door catches on the handle/lock side, check the hinges into the reveal.
- 5 Screw the striker plate to the reveal in line with the door lock.
- 6 Use a 3mm twist drill to drill out the rebate for the lock.
- Chisel the remainder of the timber out of the lock rebate.
- 7 Screw the closing angle onto the reveal when the door is closed.
- If the closing angle catches the door handle, the closing angle will need to be cut away to clear the handle.
- 8 Paint the exposed edge with the appropriate colour.
- 9 Always clean off all fingermarks, leave the site clean and tidy.

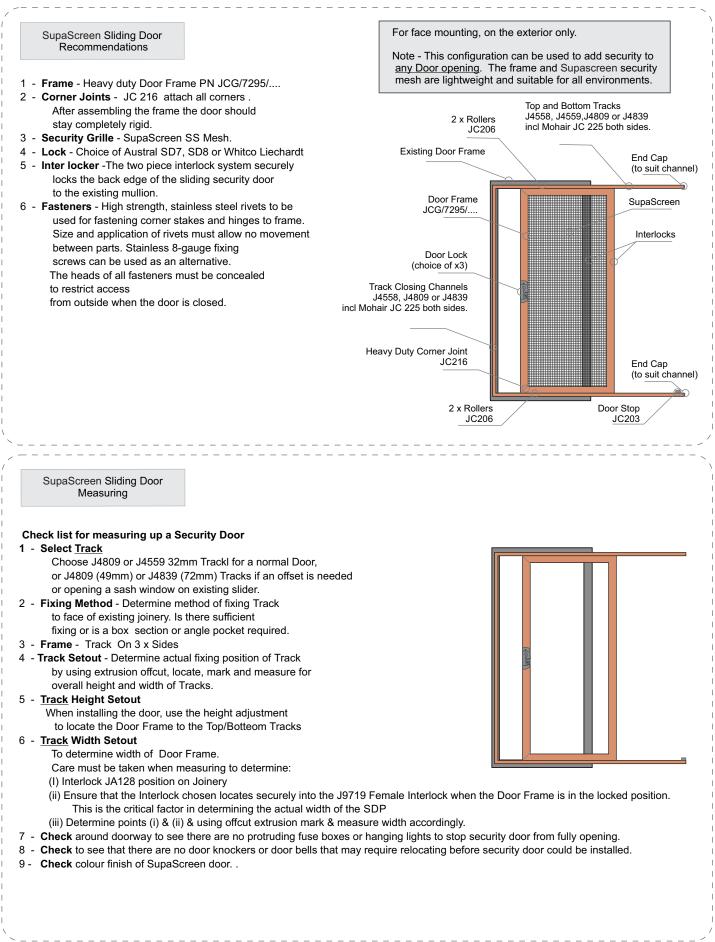

Supascreen Hinged Door Build out Installation

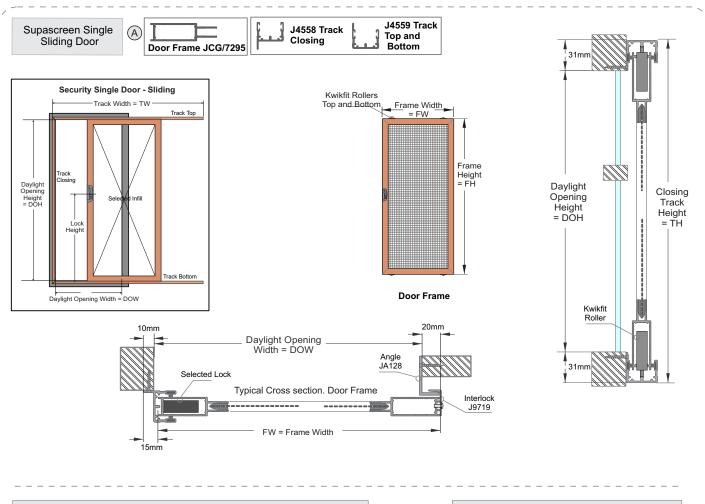

- 1 The Adaptor box is manufactured and installed first; the security door is then hung from it.
- 2 Check the door is the correct size for the application.
- 3 Measure the internal width of the build out frame to determine the size and setout for the base channel brackets (BCB).
- 4 The BCB (8 per door) are screwed to the existing door frame. 1 x each Top and Bottom, 3 x each side in line with the hinges / locking points. Fixing may be from the outside or inside depending on the existing aluminium joinery door frame.
 <u>Note:</u> In some situations, the house door may have to be removed from the hinges (knock out hinge pins)
- 5 Slide the build out frame over the 8 x BCB and position it so that the existing door opens and closes easily.
- 6 The door must fit evenly within the build out frame, ie. the door should have the same gaps top and bottom, and an even gap on the handle side. Open the door and, working from the inside, use 6g x 12mm pan s/s screws to fix the build out frame to each of the 8 x BCB. Alternatively, pop rivets can be used.
- 7 Check the door operates correctly, including the handle and lock.
- 8 Always clean off all fingermarks, leave the site clean and tidy.

SupaScreen Sliding Door Installation

1 - Check the extrusions supplied are the correct ones for this application, ie. they fit around windows and take account of any restricted clearances around the door frame.

2 - Screw the vertical jamb extrusion into position so that the top and bottom tracks can be easily and properly fixed into position.

- a- The bottom track is usually "top-fixed" extrusion.
- b The side and top tracks are usually "sub-fixed" extrusion.
- c The miters should be checked to ensure any excess 'wings' are cut off before installation
- 3 Check the door is the correct size, ie. the door doesn't interfere with any adjacent opening windows.
- 4 Screw the bottom track into place, making sure it is as close as possible to 90deg with the vertical closing jamb, and running in a straight line without sags or bumps.
- 5 Place the door onto the bottom track and level up with the closing jamb using the adjustable door rollers.
- 6 Screw the top track into position, making sure the extrusion sits underneath any opening windows.
- 7 Mark the door latch position on the closing jamb.
- 8 Using 2 of 10g x 12mm Pan S/S screws, screw the door latch packer to the closing jamb
- 9 Screw the door latch to the door latch packer using 2 of 10g x 12mm Pan S/S screws.
- fit the brush strip to the back of the door or to the mullion (prefer the mullion if there is an opening window adjacent) 10 - Fit Interlock angles to backs of Door and Mullions.
- 11 Test Doors for smoothness + shutting/locking and full retraction to stops.
- 12 Always clean off all fingermarks, leave the site clean and tidy.

Juralco SupaScreen Security Door and Window Systems - Mesh Fitting

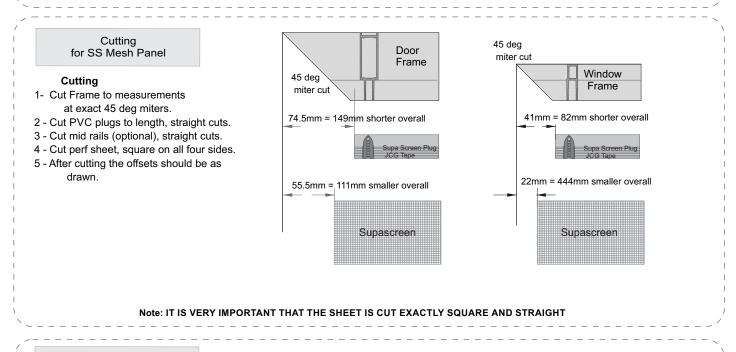

General, Tools

for SS Mesh Panel Installation

Pre Assembly

- 1- Clean up work bench, make sure work top absolutely clean. Inspect extrusions are free from damage and straight.
- 2 Read Job Sheet carefully and understand <u>All instructions.</u> All measurements, number required, lock arrangements, lock side, colour, installation type, mounting,LH or RH, all prepunching required.
- 3 Collect and check all components and extrusions needed for this job. Check all tools needed are clean and in good working order.
 - Suggested Tool and Equipment list.
 - Assembly Press, Generation Mk2 and bench
 - Dead hammer, Thor 44mm face
 - Hand Shears, Makita JS 1600 electric, or Guillotene
 - Tin snips
 - PVC- HD block 25 x 100 x 150
 - Electric/ Air drill gun and Electric screwdriver.
 - Tape Measure, Square, Screwdrivers, White marking pen or engineers chalk.
 - Electric Mitre saw with aluminium sharpened saw, set to cut exact 45 deg.
 - Corner stake locking punch
 - Punch or router for Locks and Rollers.

Window Frame 7811

Trouble Shooting Causes and Remedies

1 - Problem - Concave bow on long sides (lock, hinge) ie bows in

<u>Causes</u> - Mesh cut too small, Plug not square on mesh, Mesh not cut straight, Mesh not cut square. <u>Remedies</u> - Using a 25mm x 100mm x 300mm PVC block and a Thor PVC dead hammer, drive off the bowed frame (in most cases it will be the lock side style). Once the section of door frame has been removed, check (a) Correct seating of plug onto mesh. (b) Correct size of mesh cut, or cut not straight. Cut/trim adjust as necessary then carefully reseat the plug.

2 - Problem - Convex bow on long sides (lock, hinge) ie bows out

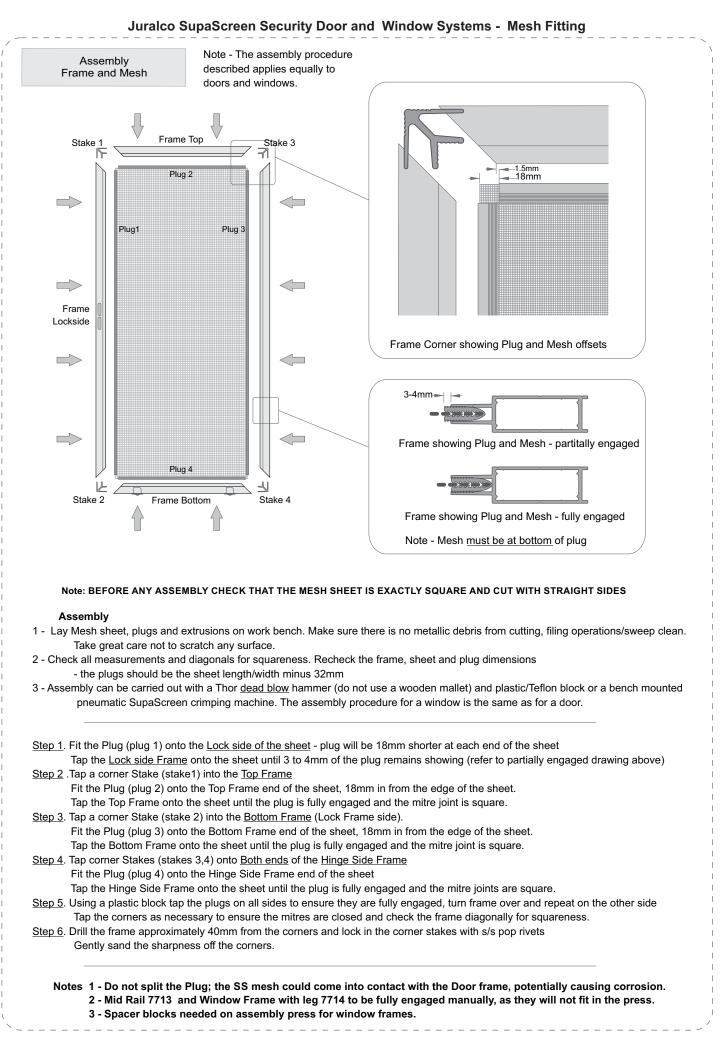

Causes - Mesh cut too large, Plug not square on mesh, Mesh not cut straight, Mesh not cut square.

<u>Remedies</u> - Using a 25mm x 100mm x 300mm PVC block and a Thor PVC dead hammer, drive off the bowed frame (in most cases it will be the lock side style). Once the section of door frame has been removed, check (a) Correct seating of plug onto mesh. (b) Correct size of mesh cut or cut not straight. Cut/trim adjust as necessary then carefully reseat the plug.

3 - Problem - Bubble or ripples in mesh

<u>Causes</u> - Mesh cut too large (common cause), Plug not square on mesh, Plug not fully inserted in frame, Mesh not cut straight, Mesh not cut square, Frame buckled, bowed.

<u>Remedies</u> - Before commencing any disassembley look to identify the problem. Mostly mesh too large/not cut straight/out of square. Remove the frame nearest the bubble/ripple using a 25mm x 100mm x 300mm PVC block and a Thor PVC dead hammer. Once the section of frame has been removed, strip off the plug and then trim one or two strands of mesh close to the affected area. Reassemble carefully.

Juralco SupaScreen Security Door and Window Systems - Powder Coating Care and Maintenance

Powder Coating Installation Care

Warning re use of solvents:

- In some cases strong solvents are recommended for thinning various types of paints and also for cleaning up mastics and sealants.
- These can be harmful to the extended life of the powder coated surface, and must not be used for cleaning purposes.
- It is important to note that the damage will not be visible immediately and may take up to I2 months to develop.

If paint splashes or sealants and mastics need to be removed then the following may be safely used: Methylated Spirits, Ethyl Alcohol, Isopropanol or preferably a mild detergent in warm water.

Joinery Protection during Installation:

All the activity on a construction site means that your powder coated items may get knocked or scratched, splattered with mortar, plaster, textured coating or paint during the later stages of construction.

Please ensure that all powder coated articles are masked or covered at this time. It is far easier to prevent accidents than to try and correct them. Should your joinery receive mortar or paint splashes see that these are removed before cure and follow the instructions contained in this brochure.

Typical sticker used to warn other trades of the need to protect and mask off powder coated joinery (applies to anodised joinery also)

"IMPORTANT ALL TRADES' This valuable aluminium joinery will suffer permanent damage from: plaster, mortar and paint splashes - Protect if splashes occur - Immediately wash down joinery with water or meths - Do not allow splashes to harden! ~ Do not use solvents! - Do not remove this label until final clean completed.

This photograph display damage that has occurred on site, post installation. The photo of the masked joinery displays clear signs of damage that could have occurred were it not masked. Please ensure that your joinery is protected right through the entire construction process.

Powder Coating Maintenance

External - Maintenance Program:

To extend the life of external powder coated articles and to comply with warranty requirements for powder coated aluminium joinery, a simple, regular maintenance program must be implemented.

The effects of ultra violet light, atmospheric pollution, dirt, grime and airborne salt deposits will all accumulate over time and must be removed or surface staining and weathering will occur, leading to an unsightly appearance.

For external coatings, cleaning should take place every six months. In areas where pollutants are more prevalent, such as beachfront houses and industrial or geothermal areas, then a cleaning program should be carried out on a more frequent basis ie. every one to three months.

Cleaning your powder coating:

1. Carefully remove any loose surface deposits with a wet sponge. 2. Use a soft brush (non abrasive) and a mild household detergent (do not use solvents) in warm water, remove dust, salt and other deposits. 3. Rinse off with clean fresh water.

Restoring weathered or scratched surfaces:

Repair of Scuffed or Scratched surfaces Dulux Spray Cans are available in all colour card colours.

Repair of Small Scratches or Chips. Dulux Dabsticks are ideally suited for the repair of small scratches. Dabsticks may not be available in all colour card colours.

Repair of Weathered areas . Dulux Gloss Up is a light to medium cutting cream ideally suited for gloss restoration and has been specifically designed for this purpose. Gloss Up contains no waxes or silicone and is a one step system.

Surface growths, colour stains on the Supascreen Panel:

In climates with high moisture and humidity content, it is possible that a fungus will form on the Supascreen mesh due to a build up of airborne spores as the fine holes in Supascreen can act like a large air filter.

This growth cannot harm the SS Mesh, but may attack the Powder coating.

Our strong Recommendation is to regularly clean your Supascreen at least anually with a brush and warm soapy water to prevent any Fungal buildup

The first step is to test if any buildup on your Supascreen is a fungus:

- Surround a small test area with masking tape.
- Using a magnifying glass or camera zoom on your phone, focus on one specific area and using a sharp plastic or wooden implement (eg: tooth pick), lightly scratch the rust-looking substance to lift it from the screen.
- Once lifted, the black powder coating of the Supascreen should be revealed.

Liquid Removal Process:

The first step is to neutralise the surface contamination.

- Use only Wet & Forget Moss and Mould Remover. Follow the instructions on the manufacturers website and dilute it correctly.
- This product has proven to work and is not bleach or acid based which will potentially damage the powdercoating.
- 1. Apply using a squirt bottle to spray on both sides of the screen mesh
- 2. Leave on for at least a week
- 3. Repeat after 7 days

This will kill the fungus and any spores. It can take 6-12 months to break down and fall off. This is as per the manufacturer's instructions.

Mechanical Cleaning:

A cleaning cloth or soft brush will not remove the fungus. The fungus will be wrapped around the wire and will need serious effort to remove.

- The most effective product to remove the fungus is a plastic bristle brush set. These are available at Bunnings or other Hardware Outlets. 1. Fit the medium brush to a cordless drill and select the lowest speed.
- Activate the drill and apply a light to medium pressure to the mesh while moving the brush across the surface of the mesh.
 The circular motion of the brush should remove the fungus. This is a low cost and effective method of removing the fungus from the mesh.

Care:

Always take care to minimise the abrasive damage the powder coat surface that is going to occur.

- We recommend testing a small area first. Clean your test area up with water, dry it off and inspect.
- A careful balance of methods helps to remove the fungus.
- It will minimise the inevitable abrasive damage that is going to occur to the black powdercoated mesh - If you are not prepared to accept some abrasive damage to the powder coated surface do not try this method. Damage to the powder coated surface will void the warranty. Instead follow the Liquid Removal instructions.
- If you are not able or equipped to do both sides of the screen use the Liquid Removal method.
 Or mechanically clean the one side leaving the other side to clear over the coming months.
